(54) Title: **QUALITY OF VIDEO**

(57) **Abstract:** The present invention is directed towards methods, devices and a signal format for providing information for achieving better perceived image quality of a transmitted video data stream. A video and information transmitting unit (28) in a device (20) transmits a video data stream and information about subjective quality relating to the video data stream in a signal comprising at least one frame with a header section, a motion vector section and a compressed image section. A device for processing a video data stream (32) includes a video and information receiving unit (34) which receives the signal, a decoding unit (38), which decodes the video data stream, and a control unit (36), which controls use of the information about subjective quality when processing the video data stream in order to achieve better perceived image quality.
